

Vaani Across Nine Offices

Six weeks from first live call to a network-wide deployment – how the rollout progressed, where Vaani reaches, and what it is carrying.

The rollout

Two offices at launch, nine four weeks later, with volume rising at every step.

28 Jul

Live in Delhi and Indore

Both offices take their first call on the same day. 94 calls in the opening week. These two remain the network's largest by volume through to the cut, at 87% of all traffic.

Delhi

Indore

7 – 11 Aug

Three offices added, volume doubles

Jabalpur first, then Prayagraj and Lucknow inside five days. Daily volume rises from 18 to 44 calls, with Vaani answering 31 of them each day.

Indore

Jabalpur

Prayagraj

Lucknow

18 – 22 Aug

Three more, and the busiest week so far

Goa, Jaipur and Wai come online in five days. Eight offices live, and the week peaks at 55 calls a day.

Jaipur

Wai

26 Aug
– 5 Sep

Nine offices, and demand at its highest

Patna completes the network. The first days of September run at **50 calls a day** — the highest of the deployment, and more than three times the opening week.

Human agents work alongside Vaani rather than behind it. They answered **173 calls** in the period and were on duty on 20 of the 40 days since go-live. A further **64 calls reached a human agent** after the caller had already rung off, bringing the total routed through to a person to **237**.

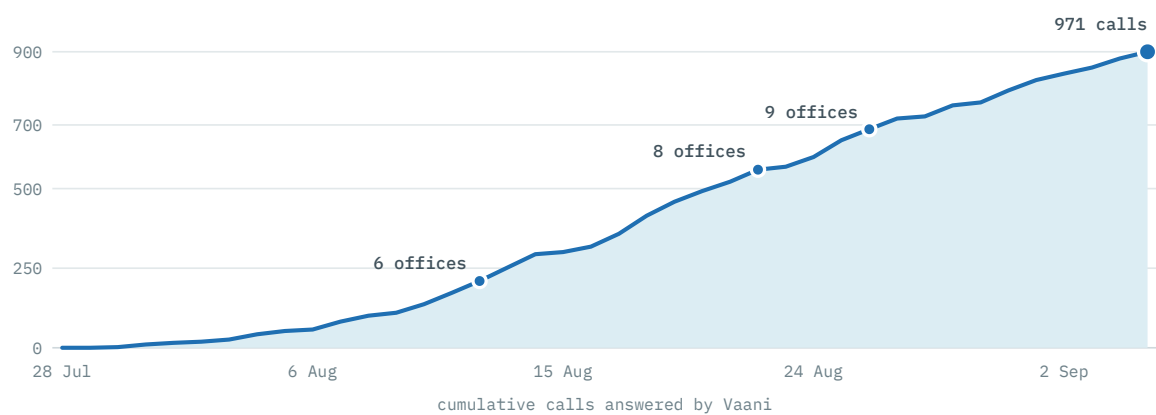

Patna

Volume

971 calls answered in the first six weeks of live service, accumulating at a steady rate of roughly 250 a week as offices came online.

Calls answered by Vaani, cumulative since go-live

Running total from the first live call on 28 July to the data cut on 5 September. Markers show the network size as the total built.

The curve does not flatten as offices are added. 100 calls by day 12, 250 by day 17, 500 by day 24, 750 by day 31, 900 by day 38 — a consistent intake through an expansion from two offices to nine.

Offices, in the order they went live

First recorded call against each CRC office. Nine live in four weeks from a two-office launch.

OFFICE	FIRST CALL	CALLS	OFFICE	FIRST CALL	CALLS
Delhi	28 Jul	900	Goa	18 Aug	45
Indore	28 Jul	416	Jaipur	21 Aug	23
Jabalpur	7 Aug	31	Wai	22 Aug	17
Prayagraj	10 Aug	26	Patna	26 Aug	37
Lucknow	11 Aug	12			

Coverage

The clearest operational change Vaani has made is when the helpline is answerable at all.

Weekends run on Vaani alone

Across the eleven weekend days since go-live, **not one call was answered by a human**. Weekend answering is Vaani by default: it took **180 of the 218** weekend calls that came in. The remaining 38 were never answered by anyone — they sit in pending, hung-up or unlabelled states.

Vaani is the only channel that covers the weekend. Human agents worked 20 of the 40 days since go-live, all of them weekdays.

Hours the helpline is answerable

Span of local time in which each channel answered calls, since go-live. Times converted from the record's UTC stamps to IST.

Channel	Start Time (IST)	End Time (IST)	Duration (hrs)
Vaani	06:30	22:30	16
Human	09:30	17:30	8

Where the calls are answered

Since go-live, 28 July. Percentages are of all calls into the network in that slice.

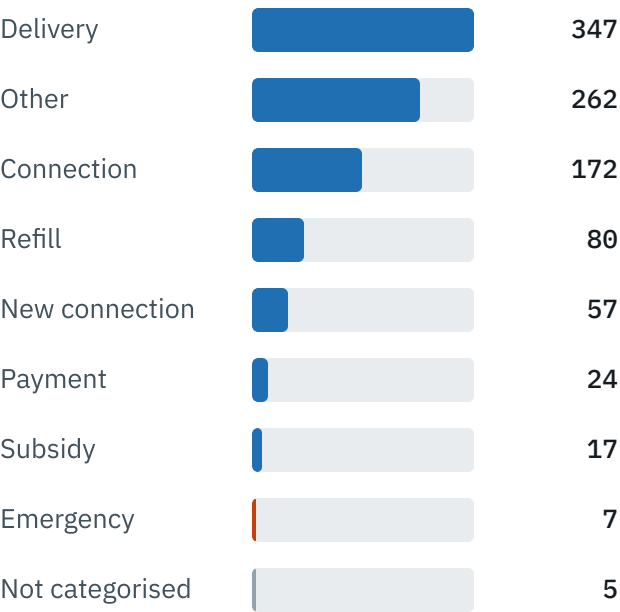

All calls since go-live	1,507
Answered by Vaani	971 • 64%
Weekend calls	218
of which Vaani	180
of which human	0
Answered by a human agent	173
Distinct hours covered	16

What Vaani is carrying

Across all 971 calls Vaani has answered — the full period, not a selected window.

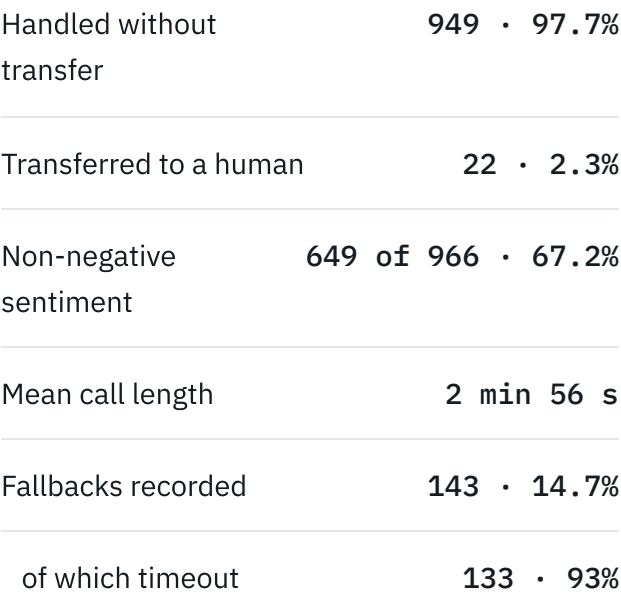

Every department area in the catalogue

Vaani has taken live calls in all eight query areas, not a narrow subset. The eight areas plus uncategorised account for all 971 calls.

Handling profile

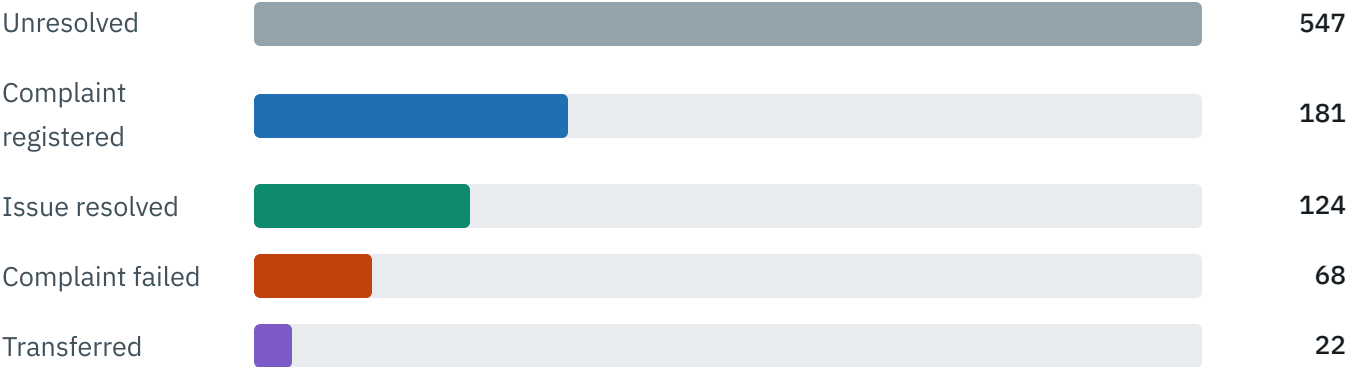

All 971 Vaani-answered calls, 28 July to 5 September.

A fallback is logged when Vaani cannot carry the call forward. It has effectively a single cause: **93% are timeouts — the caller stopped responding**. That is one tuning target rather than a class of unrelated failures.

Where Vaani's calls end up

Disposition of the 942 Vaani calls that carry a classified outcome, 28 July to 5 September.

Registering a complaint is Vaani's most common successful outcome — 181 calls, more than the 124 it resolved outright. Together those are 32% of classified calls. Of the 249 complaints attempted, 68 failed to register, a 27% failure rate on the path Vaani relies on most.

Escalation stayed rare as the network grew fivefold

Transfers to a human agent, against calls answered, across the whole deployment.

Twenty-two transfers across 971 answered calls, over a period in which the office count went from two to nine and daily volume rose 2.8×.
